

# Student Quick Play Guide

# SAFE CROSSING CREATOR

▶ Follow the easy steps in this guide to help you play the game and make sure you have the Safe Crossing Creator world imported in Minecraft Education.

## Step 1

Talk to Dot to travel to a crossing location.

## Step 4

If the pedestrian agrees that the sign works, place the sign where you think it will remind all crossing users to be safe.

## Step 2

Talk to pedestrians that have been displaying unsafe behaviours. Work out what unsafe behaviour they showed.

## Step 5

When all pedestrians at the current crossing have agreed on signs, take pictures of the safer crossing.

## Step 3

Create a sign, or choose an existing sign that you think would remind them of the safe behaviour. Place this sign on the gold block.

## Step 6

Repeat Steps 1 – 5 until all three crossings are safe.

## Handy hints

▶ (Use a right mouse click to operate the sign generator, to speak to characters and to place or rotate signs)

### ▶ Step 1 Meet Dot in HQ

Practice with the sign generator to see all the possible combinations of signs. It will save time later.

Also, matching the text and pictures is important!

### ▶ Step 2 Talk to pedestrians

Read carefully what pedestrians are telling you as they give hints that will save time making your sign.

### ▶ Step 3 Create safety signs

Remember images and text must be the best combination for each sign.

### ▶ Step 4 Place signs

Place approved signs where pedestrians are likely to take the most notice of them.

### ▶ Step 5 Take pictures of the now safer crossing

Use the camera and book available in your inventory. These are important for writing reports.

### ▶ Step 6 Move to the next crossing

Dot will support you to head off to work on your two other crossings.

Use your images in your report and when you have finished writing your report sign it and export it to give to your teacher.
